Williams Sound Earbud 013	12.00		Available online
Williams Sound Earcover 023	5.00		Available online

* The EduLink is currently used at the University of Florida's Child Study Lab

** The Dragon V2 is a Bluetooth device that can be linked with another Dragon Callpod without the need for a cell phone or computer (i.e., the two callpods work together similar to a walkie-talkie). This device was originally suggested as an audio-equipment option on the PCIT Listserv.

*** Some clinicians on the PCIT Listserv have described audio systems that have been installed in their clinics. These options include standard phone systems equipped with cordless headsets and encrypted wireless systems installed in the building. Pricing for these systems vary, but generally tend to be expensive.

Reference: Except where noted otherwise, equipment listed in the above table was originally compiled and posted on the OUHSC website at <http://devbehavpeds.ouhsc.edu/pcitrs.asp>

NOTE: Before using any audio equipment or system, be sure that it complies with confidentiality requirements and would not transmit session content or confidential information to an unauthorized third party.
